

Football Management System (FMS)

Current Business Scenario

- Football is the most popular sport in today's world, and is governed by the Football Association (FA), with defined set of rules and regulations applicable to all Professional Clubs/Teams in that region.
- Clubs all across the globe, follow the directives defined in Regulations & Licensing manual. These manuals states and demands the clubs to be properly organized with full professional set-up.
- The FA committees need all of its clubs to meet the international standards for better exposure with the company and/or organizational level management. Here, arises a need to create an Enterprise Management application for all such clubs, to deal with the requirements of the Football Associations specified in the guidelines.
- The focus is to track all the information that a club deal with and generate reports that best explains the season's outcome.

Key Challenges

- Inaccurate knowledge of Football Domain
- Lengthy process of Requirement Gathering
- Improper Functional analysis of the data
- Lack of Functional to Technical Know-How
